The original AutoCAD software was licensed to commercial CAD users and was released in two versions: AutoCAD LT (Basic) and AutoCAD LT/Mk II (Professional). The major difference between the two versions was the ease of using the software; AutoCAD LT was designed for beginners and had a very simple user interface, while AutoCAD LT/Mk II was intended for a more experienced user. In addition, the LT version was sold at a lower price. On January 30, 2012, Autodesk announced a new version of AutoCAD. Called AutoCAD 2012, this new version of AutoCAD is a release of AutoCAD LT/Mk II, and it allows the user to open files from earlier releases of AutoCAD and update existing drawings with additional functionality and new editing tools. AutoCAD is a two-dimensional drafting software application that enables users to create and edit drafting and design models. Users of the software can manipulate objects (such as lines, blocks, and arcs) to draw the desired design, and then refine and edit their designs in successive steps. The user interface enables the operator to manipulate the drawing objects using a variety of commands that can be selected from a menu displayed on the computer screen. Each command is assigned a keyboard shortcut, so that the operator can access commands from the menu while typing on the keyboard. Users of AutoCAD can work on paper or digitally using tools that create, modify, and print paper and digital designs. Some AutoCAD operators can produce scaled or proportionally reduced drawings. Others can view and manipulate images from files and print these images on a local or networked printer. The software also has a variety of features that allow operators to collect and organize data, and create schedules and work instructions. AutoCAD LT/Mk II is a version of AutoCAD first released by Autodesk on March 31, 1997. This version has been the most widely used by architects and designers. It is free to download and use, but the user must have a copy of the AutoCAD software in order to use AutoCAD LT/Mk II. The user interface in this version has been simplified, and includes commands that enable the operator to work with blocks, groups, and annotations. It allows importing and exporting files from various 2D CAD programs, such as FreeCAD, DraftSight and SketchUp. MacOS AutoCAD natively supports AutoCAD LT and AutoCAD LT/2010. AutoCAD 2007 and earlier only supports AutoCAD LT. MacOS X, for which AutoCAD LT is also available, includes the Cocoa Aqua interface and many UI improvements, including contextual menus, folder icons, and transparent windows. MacOS X Server provides the ability to manage server-based installations of AutoCAD in a distributed computing environment. MacOS X Server 2.0 further expands the file-access security and integrity features, user-mapping capabilities, and other capabilities of the original version. In 2011, CADGroup LLC, a developer of CAD and CAE tools for MacOS, released the MacAutoCAD 2.0 update, which integrated many of the features of the earlier version of AutoCAD into the older MacOS 10.5 operating system. I wonder if there is a way to have the other items stack on top of each other. ~~~ lennysan Hm, think about it - you have it so you're standing in front of a car, you grab a bunch of items from the car and store them, and as you walk you move those items in front of you and grab them. Q: What's the difference between gzip and bzip2 compressed data? I downloaded a web page in.gz format and then ran wget -qO- -k -K to decompress it to.bz2. As I understand, gzip is basically bzip2 and gzip is much simpler. But these two formats seem different to me. Why? A: The wikipedia page for gzip says it uses the zlib library (bzip2 uses the same library) to compress data: Gzip is implemented with the zlib library. So I guess, bzip2 is just an optimized version of gzip. Q: Why does the ZF2 module Generator task fail when I try to update code? I'm using the ZF2 Module Generator to build a module for ZF2 that I intend to use. I've followed the documentation, and I'm pretty sure I've configured the relevant parts of the code generation correctly, but I'm still getting the following error when I try to run the module generator: [INFO] Module: plugin\Module [INFO] Validating: CheckModuleLoaderConfiguration
