The KeyMacro software is a Windows utility that helps you assign mouse buttons to any keyboard key. The program gives you an option to test out key combinations by using your mouse in order to make sure the key combinations work correctly. The mouse pointer is displayed on the screen as an arrow and is controlled by the keystrokes you define.

You can enable this mouse-to-keyboard feature for any number of mouse buttons. You can also choose to assign mouse buttons for specific mouse directions (up, down, left, right), or you can group mouse buttons together to form multi-button mouse functions. If you happen to have a laptop, a netbook, or a tablet, you can easily integrate the KeyMacro with your other devices by using the application's remote control function. It can help you access applications, files, web pages, and control media playback. Bottom line The KeyMacro is a handy application that will help you get more out of your computer and your mouse by

enabling you to quickly customize the buttons of your mouse, or to assign them to the mouse buttons of your choice. MouseKeys is a free Windows software utility that can help you quickly change mouse settings in case your computer stops working. When you run the program it will show a small black window that covers the screen. At the bottom of the window you will find a text box where you can enter a key combination to the mouse buttons. The mouse is displayed as a small black rectangle with a cross-hair cursor. All mouse movements can be controlled with the combination of mouse buttons and

keys that you define. MouseKeys settings
The program gives you a choice to set up
different mouse actions with different
combination of mouse buttons. The use
of mouse keys is very convenient since
you do not have to memorize any mouse
button assignment combinations. Just
look at the bottom of the screen where
you will find a text box where you can
enter a key combination that you want to
be executed when you press the specified
mouse buttons. You can have any number
of mouse keys defined and can remove
them as well. MouseKeys program
interface The MouseKeys interface
consists of a separate window for each

mouse button. At the top of each window is a text box where you can type a key combination for each mouse button. You can set up a key combination for any mouse button that you want to be executed on pressing the mouse buttons. When you are done you can simply press the OK button to finalize the settings

What's New in the SOSMouse?

SOSMouse is a small software application whose purpose is to help you move the mouse pointer with the aid of your keyboard in case the device stops working. Drop it on portable devices You can keep SOSMouse stored on USB flash drives or other devices. You can run it directly on your system by opening the executable file because you do not have to go through an installation process. Deleting the file that you have downloaded from the Internet is sufficient for helping you uninstall the program because it does not store entries

in your Windows registry. In addition, you may open it without administrative privileges. Unobtrusive running mode At the end of the installation process you can find SOSMouse sitting quietly in the system tray. It hides only a few configuration settings under the hood. There's no support for a help manual but you can venture into tweaking the dedicated parameters on your own because they look easy to work with. Set up mouse clicks SOSMouse gives you the possibility to set up hotkeys for left or right mouse clicks, up/down and left/right mouse movements, as well as down and up left actions. You are given the

freedom to configure multiple hotkeys for each mouse action and remove them. Tests have shown that the application executes a task very quickly and without hampering your computer's performance. It does not eat up a lot of CPU and memory so the overall performance of the computer is not hampered. Bottom line All things considered, SOSMouse delivers a simple yet efficient solution for helping you control mouse movements and clicks using your keyboard, and can be handled by beginners and professionals alike. System Requirements:

Battlefield 1 has a minimum system requirement of a mid-range system that runs at 4 GB RAM, 8GB HDD space and 1080P display. The game is best played on systems equipped with a Nvidia GeForce GTX 1080 graphics card. The game will also run on Nvidia Titan or higher cards, but it will experience moderate to severe dips in performance. We recommend using a custom game profile that sets a high maximum graphical quality for the game. The performance of the game can be

improved with SLI and crossfire setups.
The game is also recommended to be
installed
