What's New in the?

TypeHelper is a handy and reliable application designed to create and execute text scripts in order to automate writing tasks. Users will be able to create an unlimited number of scripts, which will be replayed and inserted into the desired window once you press the preset hotkey. What's New Version 7.1.1: • Mouse cursor still won't hover the application icon (Cursors/Hover). • 'Undo' button will toggle 'Undo' status when it's already active. • Configurable 'auto-save' settings now are in the Preferences > Auto-save. • Configurable Options > Hotkey will now set the hotkey (default is 'Shift+Ctrl+S'). • Restart icon will now be shown during 'Run' or 'Save' operations. • Now you can also set the main application window size (Preferences > Main window). • Now there's a warning before saving script if window is opened/closed. Ratings and Reviews 3 out of 5 4 Ratings 4 Ratings Too complicated and buggy for a $30 upgrade , 10/15/2012 Beware of installing this application. It is too complicated and buggy for $30. I had issues with the script running many times in a row until the script was corrupt. I couldn't find any documentation. It took me a while to figure out how to use the hotkeys. It is well thought of, but could have done a much better job with the documentation. Too complicated and buggy for a $30 upgrade , 10/15/2012 Beware of installing this application.
