AutoCAD is a registered trademark of Autodesk, Inc. AutoCAD is a commercial computer-aided design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. Designers using computer-aided design (CAD) software can use a variety of visual tools to create and manipulate graphics data. Visually, these tools include, but are not limited to: A path is a polyline that you can use to create shapes, like letters, text, and shapes A line is a path that is a two-dimensional (2D) object that you can create. An area is a shaded 2D shape that you can create. A block is a 3D object. CAD Software Tools AutoCAD is a vector graphics application. A vector graphics application can draw any shape and is not limited to a line, an area, or a block. In fact, a path or a polyline can be used as a vector graphic object. Because the shapes or objects drawn with a vector graphic application are mathematical representations, they can be scaled without changing their appearance, unlike raster graphic applications, such as Microsoft Paint or Adobe Photoshop. The following figure shows three visual tools that can be used with AutoCAD to create and manipulate graphics data: Visual Tools for AutoCAD

Selecting a path or a line and using the various tools that you can use with these graphics elements creates a shape. Using the graphically created shape, you can manipulate the shape to create new shapes. For example, you can extend a line to create a new polyline that you can use to draw a shape or to create an area. Creating a shape involves creating a path that is the line or the polyline and then using the visual tools that you want to apply to that path. For example, to create a shape that is a polyline, you would use the Polyline tool. A Polyline tool has many different options, such as the color, the style, the scale, and the rotation

I don't think you can have two different "character" films in the same year. As great as "the Godfather" is, it is not as much of a "character" film as say, "E.T." or "American Beauty". And it is not as much of a character film as say, "Return of the Jedi". There has to be a "type" film for that year and even with "AI", they couldn't do a pure sci-fi movie...the plot comes down to that classic cop story. They would have had a more successful film with a bit of a sci-fi plot line. How about it? All the rest of the films are pure sci-fi (with some exceptions) and are still being made today. How about it? All the rest of the films are pure sci-fi (with some exceptions) and are still being made today. the Godfather was a western first. How about it? I disagree. AI was made before the Godfather. Pretty much every star wars movie was and is. Godfather was pretty much a western. Remember the part where Michael decides to turn to the mob to make his own country? How about it? I disagree. AI was made before the Godfather. Pretty much every star wars movie was and is. Godfather was pretty much a western. Remember the part where Michael decides to turn to the mob to make his own country? then i stand corrected. didn't know that. But even if it was a western first, you would have to admit that it wasn't a western like we think of a western. Certainly wasn't the Shane of the '50s. That film had a lot of gritty reality to it. And, as a genuine western, I have a hard time thinking of a better plot, but a good plot
