Pd-Catalyzed  $\alpha$ -C-H Functionalization of Indoles with Silyl enol ethers:

Chemoselective Construction of Heterobimetallic Frameworks. The Pd-catalyzed regioselective  $\alpha$ -C-H functionalization of indoles with silyl enol ethers has been achieved via geminal C-H activation. This provides a facile approach to heterobimetallic complexes constructed from fully aryl-substituted indoles and 1,3-bis(trimethylsilyl)propane. The present reactions are unprecedented examples of the regioselective  $\alpha$ -C-H functionalization of indoles.

Creezy little secret that's FUN, FUN, FUN!!!!!!

AHAHAHA (also known as "Ah-ha the First Kiss" This is a very fun game that I guess is like "Connect 4" but with a lot more added in. The goal here is to take and keep a target square in the middle and then place your "wild card" on a side with a square. When you have your wild card on a side with a square you have to connect it to that square and then draw a line to either the right or left, depending on how the tiles land. The wild card then becomes the new center tile and you have to connect it to the right or left to get your target to be the center of the board. When you are center, then the game ends. You can play with single or double tiles and there are different "wild cards". When you fill in the center white square with a "wild card" it makes that tile more valuable. Oh, and there are lots of colors to choose from. So the best thing about this game is that it's like playing cards, can be played anywhere with any combination of people, and it's a LOT of fun. The only thing is that you can't use the same number of tiles as there are on the original "Connect 4" board, so you'll need more than one set of tiles. (A) Collected all killed animals in the West Nile region of the U.S. (yellow). (B) Black-legged ticks were collected from white-footed mice from Jun 2006 to Dec 2009 in five different states (red). (C
